

ERIC TRINQUE

Forward Deployed Engineer | AI-Enabled Implementation | Full-Stack Product Builder
Gainesville, FL

PROFESSIONAL SUMMARY

Forward deployed engineer candidate combining hands-on full-stack software development, stakeholder discovery, technical product ownership, implementation planning, and AI-assisted engineering workflows. Experienced with Go, TypeScript, Kotlin, React, PostgreSQL, REST APIs, Auth0, Netlify Functions, Claude Code, Codex, OpenCode, and Claude-Code CLI evaluation flows through Alignerr. Owns Wish-Graph front-to-back as a real product and builds AI-enabled developer tooling including GD-Scope, an MCP/Ollama-compatible server for Godot development workflows.

FORWARD DEPLOYED ENGINEERING SKILLS

Field Engineering	Requirements discovery, stakeholder interviews, solution design, technical demos, adoption feedback, risk tracking
Implementation	Go, JavaScript/TypeScript, Kotlin, Python, SQL, React, Node.js, PostgreSQL, REST APIs, Auth0, Netlify Functions
AI / Agentic Coding	Claude Code, Claude-Code CLI, Codex, OpenCode, MCP, Ollama, semantic search, AI code review, validation workflows
Delivery Practices	Agile/Scrum, CI/CD, Git/GitHub, Docker, Linux, test planning, debugging, integration testing, documentation

RELEVANT EXPERIENCE

Software Developer (Freelance) | Remote | 2024 - Present

- Delivered a stakeholder-driven enterprise intranet platform serving 50+ concurrent users with 99.5% uptime using Go REST APIs, React/TypeScript, and PostgreSQL, reducing manual reporting time by 40%.
- Translated operational requirements into shipped features across authentication, role-based access control, reporting workflows, deployment automation, and user-facing UI improvements.
- Integrated AI-assisted engineering workflows using Claude Code, Codex, and OpenCode for implementation planning, refactoring, test coverage review, documentation, and UI iteration while retaining final human review ownership.

AI Training Specialist - Software Engineering | Alignerr AI & Outlier AI | Remote | 2024 - Present

- Evaluated 500+ AI-generated coding solutions across Go, C++, Python, TypeScript, and JavaScript, producing structured feedback on correctness, performance, security, maintainability, and tool-use quality.
- Worked with Claude-Code CLI training flows through Alignerr, assessing agentic coding behavior, validating implementation paths, reviewing generated tests, and clarifying expected engineering outcomes.
- Designed validation strategies with unit tests, integration tests, edge-case checks, debugging workflows, and regression analysis to improve AI-generated software quality.

Owner/Operator | Resolvd LLC | Gainesville, FL | 2020 - 2024

- Owned end-to-end delivery for 200+ client projects with aggregated value exceeding \$15M, maintaining 100% on-time delivery and 97% budget adherence through scope control, communication, and risk management.
- Led cross-functional teams of 5-15 contractors and vendors, establishing dashboards, escalation paths, communication protocols, and milestone tracking systems that reduced issue resolution time by 60%.

SELECTED PROJECTS

Wish-Graph: Game Discovery, Wishlist Intelligence, and Developer Analytics Platform | Owner / Builder

- Own and build a full product from concept through implementation, connecting gamer wishlist management, game-specific news feeds, project/community spaces, and developer-facing analytics workflows.
- Designed implementation paths for Auth0-based identity, Steam callback handling, Netlify Functions, third-party platform integrations, mobile/web user flows, and analytics concepts for intent, demand, feedback, feature requests, and gripes.
- Used Claude Code, Codex, and OpenCode to support agentic coding loops across architecture planning, implementation sequencing, UI iteration, documentation, and validation.

GD-Scope: MCP Server for Godot Game Development | Go, MCP, Ollama, Godot

- Built a localhost-first MCP server giving AI assistants structured access to Godot project files, scenes, scripts, project metadata, documentation, semantic search, and custom tools.
- Implemented unified MCP and Ollama-compatible endpoints on a single port, supporting local LLM workflows, automatic tool calling, and AI-assisted game development context retrieval.

Fractal Generator: Desktop Fractal & L-System Explorer | Kotlin, JavaFX, Gradle

- Developed a Kotlin/JavaFX desktop application for fractal and L-system generation, focused on recursive rendering, parameter exploration, interactive controls, and mathematical visualization UX.

EDUCATION

Associate of Science in Computer Science | Full Sail University | Completed May 2026 | GPA: 3.75

Coursework: Data Structures & Algorithms, OOP, Databases, Software Engineering, Memory Management, AI/ML. Professional Development: Boot.dev backend/systems; Frontend Masters JS/TS/React/Node.js.
