

ERIC TRINQUE

Software Engineer | AI-Assisted Development | Full-Stack Product Builder
Gainesville, FL

PROFESSIONAL SUMMARY

Software engineer specializing in full-stack development, concurrent systems, algorithm design, and AI-assisted engineering workflows. Experienced with Claude Code, Codex, OpenCode, and Claude-Code CLI training/evaluation flows through Alignerr, with a strong ability to review, test, debug, and improve AI-generated code in modern agentic development environments. Owns Wish-Graph as a front-to-back product spanning product strategy, architecture, UX, integrations, analytics concepts, and implementation.

CORE SKILLS

Languages	Go, C++, Kotlin, JavaScript, TypeScript, Python, SQL
Frontend / Mobile	React, TypeScript, TailwindCSS, Bootstrap, JavaFX, wxWidgets, Kotlin/Compose Multiplatform
Backend / Data	Node.js, REST APIs, PostgreSQL, MySQL, authentication flows, data modeling, API integration
AI Coding	Claude Code, Claude-Code CLI, Codex, OpenCode, AI code review, prompt-driven implementation, agentic coding loops, model output evaluation
Tools / Practices	Docker, Kubernetes, Git, GitHub, Linux, CI/CD, unit testing, integration testing, TDD, Agile/Scrum, code review, debugging

PROFESSIONAL EXPERIENCE

Software Developer (Freelance) | Remote | 2024 - Present

- Engineered enterprise intranet platform serving 50+ concurrent users with 99.5% uptime using Go REST API backend, React/TypeScript frontend, and PostgreSQL database, reducing manual reporting time by 40%.
- Architected secure authentication system implementing JWT token-based authorization and role-based access control across 3 admin tiers.
- Automated deployment pipeline using Git version control and CI/CD workflows, reducing deployment time from 2 hours to 15 minutes while maintaining zero-downtime releases.
- Integrated AI-assisted development workflows using Claude Code, Codex, and OpenCode to accelerate implementation planning, test coverage review, refactoring, documentation, and UI iteration while retaining human code review ownership.

AI Training Specialist - Software Engineering | Alignerr AI & Outlier AI | Remote | 2024 - Present

- Conducted 500+ code reviews of AI-generated solutions across Go, C++, Python, TypeScript, and JavaScript, identifying correctness issues, security vulnerabilities, and performance bottlenecks.
- Worked with Claude-Code CLI training flows through Alignerr, evaluating agentic coding behavior, validating tool-use decisions, and producing detailed technical feedback for model improvement.
- Designed and executed comprehensive test suites including unit tests, integration tests, edge-case validation, and regression checks across multiple programming paradigms.
- Used debugging tools and profilers including GDB and Chrome DevTools to diagnose memory leaks, race conditions, runtime errors, and performance defects in generated code.

Owner/Operator | Resolvd LLC | Gainesville, FL | 2020 - 2024

- Managed end-to-end project delivery for 200+ clients with aggregated project value exceeding \$15M, maintaining 100% on-time delivery and 97% budget adherence.
- Led cross-functional teams of 5-15 contractors and vendors while establishing standardized communication protocols, dashboards, and risk tracking systems.

TECHNICAL PROJECTS

Wish-Graph: Game Discovery, Wishlist Intelligence, and Developer Analytics Platform | Owner / Full-Stack Developer

- Own and build a full product from concept through implementation, connecting gamer wishlist management, game-specific news feeds, project/community spaces, and developer-facing analytics workflows.
- Designed architecture for authenticated account linking, Steam callback handling, and third-party integration paths using Auth0, Netlify Functions, platform APIs, and application-side identity verification.
- Developed product and technical direction for analytics systems that translate user intent, wishlisting behavior, feedback, feature requests, gripes, and trend signals into actionable developer insights.
- Created web/mobile UI direction, branded asset systems, and implementation-ready user flows while using Claude Code, Codex, and OpenCode to support iterative agentic coding workflows.

GD-Scope: MCP Server for Godot Game Development | Go, MCP, Ollama, Godot

- Built a localhost-first MCP server giving AI assistants structured access to Godot projects through file, scene, script, project metadata, documentation, and semantic search tools.
- Implemented unified server architecture with MCP protocol and Ollama-compatible chat/generate endpoints on a single port, supporting local LLM workflows and automatic tool calling.

Fractal Generator: Desktop Fractal & L-System Explorer | Kotlin, JavaFX, Gradle

- Developed a desktop application for fractal and L-system generation using Kotlin, JavaFX 21, Gradle/Kotlin DSL, modular JVM tooling, and packaged runtime support via jlink.
- Built an interactive mathematical visualization foundation for recursive rendering, parameter exploration, UI controls, and iterative desktop UX experimentation.

EDUCATION

Associate of Science in Computer Science | Full Sail University | Completed May 2026 | GPA: 3.75

Coursework: Data Structures & Algorithms, OOP, Databases, Software Engineering, Memory Management, AI/ML. Professional Development: Boot.dev backend/systems; Frontend Masters JS/TS/React/Node.js.
