Aug 2023 - Present (1y 8m)

BackEnd WebDev

- Learned back-end development concepts,
- Database design
- API design
- Server-side programming
- Languages: GO, Python, SQL.
- Technologies: Docker, Kubernetes, Postgress,

Snippets

Insurance Website

My current project - Modern company website for a family member, which serves as a platform to showcase their services and provide essential information about the business. The website features a simple design, with clear navigation and a dedicated section for company news and updates. A contact form allows visitors to reach out with questions or requests for more information, making it easy for potential clients to get in touch.

More about me

In my next job it's important that...

I am deeply committed to education and professional development, and I want to work for a company that also values and supports employee growth and learning opportunities.

At work I'm best at...

At work, I am best at leveraging my analytical mindset and problem-solving skills to drive results. Whether it's tackling a difficult technical issue or collaborating to bring new ideas to fruition.

Right now I'm learning...

Currently I am focusing on front-end languages, frameworks and concepts. I want to strengthen and deepen my knowledge of modern practices.

I want to work for a company that...

I thrive in environments where open communication and collaboration are priority, and I want to work with colleagues who share my passion for teamwork and mutual drive.

I'm making a career change because...

I am following my dream. I have wanted to work in tech and learning programming since high school, however life took another path. I am seizing the opportunity to make my dream into a reality.

Interests

I enjoy gardening and working on my home, currently renovating our house little by little. I enjoy Disc Golf when I get the opportunity. Spending time with my daughter. Learning every day.
